

fwDesign Version alpha 0.7

- Edit Configuration : Basic level TE

This software allows you to design soft cells wings without limits : paragliders, kites, parachutes... It is easy to use and has an efficient interface which enables you to create exactly what you wish.

Interface :

- Advanced or basic Interface
- Two display views (faster design)

Features :

- Advanced skin tension and ballooning options
- Powerful bridling capabilities
- Internal structure option (common or independent)
- Exports ready for manufacturers
- Etc...

fwDesign is still in development, and a lot of features will be added.

- dxf imports
- graphics cut
- etc...
- And all features that you want to add...**
